

PAPER_1624 — Earth Orbital Velocity = $v_{\oplus} = N_{CH} + 2 \cdot SO + \Phi - F^2 \cdot D - F^2 \cdot SSQ = 29.788 \text{ km/s}$

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Geophysics **Date:** June 18, 2026 **Status:** CLOSED — 0.026% closure

Observation

PAPER_1209CC_S612 (Geophysics Unified Proof Set) gives the formula:

$$v_{\oplus} = N_{CH} + 2 \cdot SO + \Phi - F^2 \cdot D - F^2 \cdot SSQ = 29.788 \text{ km/s}$$

Residual: **0.026%**.

UQFF Closed Identity

$$v_{\oplus} = N_{CH} + 2 \cdot SO + \Phi - F^2 \cdot D - F^2 \cdot SSQ = 29.788 \text{ km/s} \quad 0.026\%$$

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Empirical geophysics measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
