

PAPER_1628 — Hydrogen Atomic Mass = $H = F \cdot SO + F \cdot SSQ \cdot \Phi / D_BSFG = 1 + 0.00792 = 1.00792 \text{ u}$

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Chemistry **Date:** June 18, 2026 **Status:** CLOSED — 0.008% closure

Observation

PAPER_1209AA_S585 (Chemistry Unified Proof Set) gives:

$$H = F \cdot SO + F \cdot SSQ \cdot \Phi / D_BSFG = 1 + 0.00792 = 1.00792 \text{ u}$$

Residual: **0.008%**.

UQFF Closed Identity

$$H = F \cdot SO + F \cdot SSQ \cdot \Phi / D_BSFG = 1 + 0.00792 = 1.00792 \text{ u} \quad 0.008\%$$

The formula uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Empirical chemistry measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
