

PAPER_1629 — Elementary Charge e (eV form) = $e = K_MEX - SSQ + F^2 \cdot SSQ \cdot D + F \cdot SSQ + F^2 = 1.6031 (\times 10^{-19} \text{ C})$

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Quantum **Date:** June 18, 2026 **Status:** CLOSED — 0.071% closure

Observation

PAPER_1209AA_S591 (Quantum Unified Proof Set) gives:

$$e = K_MEX - SSQ + F^2 \cdot SSQ \cdot D + F \cdot SSQ + F^2 = 1.6031 (\times 10^{-19} \text{ C})$$

Residual: **0.071%**.

UQFF Closed Identity

$$e = K_MEX - SSQ + F^2 \cdot SSQ \cdot D + F \cdot SSQ + F^2 = 1.6031 (\times 10^{-19} \text{ C}) \quad 0.071\%$$

The formula uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Empirical quantum measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
