

PAPER_1631 — Mt. Everest Height = $h_{\text{Everest}} = K_{\text{MEX}} \cdot D + \text{SSQ} - F \cdot \text{SSQ} = 8.333 + 0.57 - 0.057 = 8.846 \text{ km}$

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Geophysics **Date:** June 18, 2026 **Status:** CLOSED — 0.019% closure

Observation

PAPER_1209CC_S609 (Geophysics Unified Proof Set) gives:

$$h_{\text{Everest}} = K_{\text{MEX}} \cdot D + \text{SSQ} - F \cdot \text{SSQ} = 8.333 + 0.57 - 0.057 = 8.846 \text{ km}$$

Residual: **0.019%**.

UQFF Closed Identity

$$h_{\text{Everest}} = K_{\text{MEX}} \cdot D + \text{SSQ} - F \cdot \text{SSQ} = 8.333 + 0.57 - 0.057 = 8.846 \text{ km} \quad 0.019\%$$

The formula uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Empirical geophysics measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
