

PAPER_1633 — Parsec / Light-Year Ratio = pc/ly = $\Phi \cdot D - \Phi \cdot F + F^2 \cdot \Phi + F^3 \cdot D = 3.2623$

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Astronomy **Date:** June 18, 2026 **Status:** CLOSED — 0.022% closure

Observation

PAPER_1209Z_S575 (Astronomy Unified Proof Set) gives:

$$\text{pc/ly} = \Phi \cdot D - \Phi \cdot F + F^2 \cdot \Phi + F^3 \cdot D = 3.2623$$

Residual: **0.022%**.

UQFF Closed Identity

$$\text{pc/ly} = \Phi \cdot D - \Phi \cdot F + F^2 \cdot \Phi + F^3 \cdot D = 3.2623 \quad 0.022\%$$

The formula uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Empirical astronomy measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
