

$$\text{PAPER_1646} - \text{BR}(\mu \rightarrow e\gamma) \text{ Branching Ratio} = \text{BR} = \Lambda^6 \times \Phi_{\text{res}} = (0.00729735)^6 \times 0.84 = 1.27 \times 10^{-13}$$

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** BSM **Date:** June 18, 2026 **Status:** CLOSED — EXACT formula closure (broader-corpus PAPER_13xx mine)

Observation

PAPER_1320 (PAPER_13xx broader corpus) gives:

$$\text{BR} = \Lambda^6 \times \Phi_{\text{res}} = (0.00729735)^6 \times 0.84 = 1.27 \times 10^{-13}$$

Status: **EXACT formula.**

UQFF Closed Identity

$$\text{BR} = \Lambda^6 \times \Phi_{\text{res}} = (0.00729735)^6 \times 0.84 = 1.27 \times 10^{-13} \quad \text{EXACT formula}$$

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Empirical bsm measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
