

PAPER_1648 — PSR Crab Wind Lorentz Factor = Γ = $D_{BSFG} \times A_5 \times \Phi_{res} = 6 \times 60 \times 0.84 = 302$

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Pulsar **Date:** June 18, 2026 **Status:** CLOSED — 0.13% closure (broader-corpus PAPER_13xx mine)

Observation

PAPER_1323 (PAPER_13xx broader corpus) gives:

$$\Gamma = D_{BSFG} \times A_5 \times \Phi_{res} = 6 \times 60 \times 0.84 = 302$$

Status: **0.13%**.

UQFF Closed Identity

$$\Gamma = D_{BSFG} \times A_5 \times \Phi_{res} = 6 \times 60 \times 0.84 = 302 \quad 0.13\%$$

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Empirical pulsar measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
