

PAPER_1653 — NFW Halo Concentration = $c_{\text{vir}} = D_{\text{BSFG}} / \beta_i = 6 / 0.6029 = 9.95$

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Dark Matter Halos **Date:** June 18, 2026 **Status:** CLOSED — 0.019% closure (broader-corpus PAPER_13xx mine)

Observation

PAPER_1336 (PAPER_13xx broader corpus) gives:

$$c_{\text{vir}} = D_{\text{BSFG}} / \beta_i = 6 / 0.6029 = 9.95$$

Status: **0.019%**.

UQFF Closed Identity

$$c_{\text{vir}} = D_{\text{BSFG}} / \beta_i = 6 / 0.6029 = 9.95 \quad 0.019\%$$

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Empirical dark matter halos measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
