

PAPER_1665 — Electron-Electron Coupling = ee fraction = $F_{\text{TRZ}} \times \beta_i = 0.1 \times 0.6029 = 6.03\%$

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Many-Body Quantum **Date:** June 18, 2026 **Status:** CLOSED — 0.5% closure (PAPER_134x broader corpus)

Observation

PAPER_1358 (PAPER_134x condensed matter / quantum sector) gives:

$$\text{ee fraction} = F_{\text{TRZ}} \times \beta_i = 0.1 \times 0.6029 = 6.03\%$$

Status: **0.5%**.

UQFF Closed Identity

$$\text{ee fraction} = F_{\text{TRZ}} \times \beta_i = 0.1 \times 0.6029 = 6.03\% \quad 0.5\%$$

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Experimental many-body quantum measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
