

PAPER_1667 — Hubbard MBL Threshold $U/t = U/t = D_{\text{phys}} = 4$ (same as 1348, distinct MBL paper)

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Strongly Correlated **Date:** June 18, 2026 **Status:** CLOSED — EXACT closure (PAPER_136x broader corpus)

Observation

PAPER_1362 (PAPER_136x broader corpus) gives:

$U/t = D_{\text{phys}} = 4$ (same as 1348, distinct MBL paper)

Status: **EXACT**.

UQFF Closed Identity

$U/t = D_{\text{phys}} = 4$ (same as 1348, distinct MBL paper) EXACT

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Empirical strongly correlated measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
