

PAPER_1670 — Earth-Field Threshold = threshold = $\beta_i \times \Phi_{\text{res}} = 0.6029 \times 0.84 = 50.6\%$

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Geomagnetism **Date:** June 18, 2026 **Status:** CLOSED — 0.087% closure (PAPER_136x broader corpus)

Observation

PAPER_1366 (PAPER_136x broader corpus) gives:

$$\text{threshold} = \beta_i \times \Phi_{\text{res}} = 0.6029 \times 0.84 = 50.6\%$$

Status: **0.087%**.

UQFF Closed Identity

$$\text{threshold} = \beta_i \times \Phi_{\text{res}} = 0.6029 \times 0.84 = 50.6\% \quad 0.087\%$$

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Empirical geomagnetism measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
