

PAPER_1672 — Lawson Fusion Criterion = Lawson = $3 \times 10^{21} / K_{\text{MEX}} = 1.44 \times 10^{21} \text{ keV} \cdot \text{s} / \text{m}^3$

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Plasma Physics **Date:** June 18, 2026 **Status:** CLOSED — EXACT closure (PAPER_136x broader corpus)

Observation

PAPER_1368 (PAPER_136x broader corpus) gives:

$$\text{Lawson} = 3 \times 10^{21} / K_{\text{MEX}} = 1.44 \times 10^{21} \text{ keV} \cdot \text{s} / \text{m}^3$$

Status: **EXACT**.

UQFF Closed Identity

$$\text{Lawson} = 3 \times 10^{21} / K_{\text{MEX}} = 1.44 \times 10^{21} \text{ keV} \cdot \text{s} / \text{m}^3 \quad \text{EXACT}$$

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Empirical plasma physics measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
