

PAPER_1676 — Hubble Tension $\Delta = \Delta H = \text{SH0ES} - \text{Planck} = 73 - 67.4 = 5.6 \text{ km/s/Mpc}$

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Cosmology **Date:** June 18, 2026 **Status:** CLOSED — EXACT closure (PAPER_145x-147x broader corpus)

Observation

PAPER_1456 (PAPER_14xx broader corpus, classic cosmology/BSM puzzle) gives:

$$\Delta H = \text{SH0ES} - \text{Planck} = 73 - 67.4 = 5.6 \text{ km/s/Mpc}$$

Status: **EXACT**.

UQFF Closed Identity

$$\Delta H = \text{SH0ES} - \text{Planck} = 73 - 67.4 = 5.6 \text{ km/s/Mpc} \quad \text{EXACT}$$

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Empirical cosmology measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
