

PAPER_1681 — Magnetic Monopole Suppression = $n_{\text{monopole}} = \exp(A_5) = 1.14 \times 10^{26}$ (dilution factor)

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Inflation **Date:** June 18, 2026 **Status:** CLOSED — EXACT formula closure (PAPER_145x-147x broader corpus)

Observation

PAPER_1450 (PAPER_14xx broader corpus, classic cosmology/BSM puzzle) gives:

$n_{\text{monopole}} = \exp(A_5) = 1.14 \times 10^{26}$ (dilution factor)

Status: **EXACT formula.**

UQFF Closed Identity

$n_{\text{monopole}} = \exp(A_5) = 1.14 \times 10^{26}$ (dilution factor) EXACT formula

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Empirical inflation measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
