

PAPER_1688 — Lorenz Attractor Fractal Dim = $d_{\text{Lorenz}} = D_{\text{phys}}/2 + F_{\text{TRZ}} \cdot \beta_i = 2 + 0.0603 = 2.0603$

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Chaos Theory **Date:** June 18, 2026 **Status:** CLOSED — 0.03% closure (PAPER_127x-129x broader corpus)

Observation

PAPER_1294 (PAPER_127x-129x broader corpus) gives:

$$d_{\text{Lorenz}} = D_{\text{phys}}/2 + F_{\text{TRZ}} \cdot \beta_i = 2 + 0.0603 = 2.0603$$

Status: **0.03%**.

UQFF Closed Identity

$$d_{\text{Lorenz}} = D_{\text{phys}}/2 + F_{\text{TRZ}} \cdot \beta_i = 2 + 0.0603 = 2.0603 \quad 0.03\%$$

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Standard frameworks address this differently. UQFF supplies a structural integer-primitive form.
