

PAPER_1700 — Pochhammer $26! = 4.0329 \times 10^{26} = 26! = \text{factorial}(26) = 403291461126605635584000000$

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Math **Date:** June 18, 2026 **Status:** CLOSED — EXACT closure (PAPER_115x-117x foundational)

Observation

PAPER_1161 (PAPER_115x-117x foundational corpus) gives:

$26! = \text{factorial}(26) = 403291461126605635584000000$

Status: **EXACT**.

UQFF Closed Identity

$26! = \text{factorial}(26) = 403291461126605635584000000$ EXACT

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Standard frameworks address this differently. UQFF supplies a structural integer-primitive form.
