

PAPER_1702 — $\sum \beta_i$ (i=1..4) Triangular Sum = $\sum_{i=1}^4 3(5-i)/20 = 3/2$

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** UQFF Foundational **Date:** June 18, 2026 **Status:** CLOSED — EXACT closure (PAPER_115x-117x foundational)

Observation

PAPER_1165 (PAPER_115x-117x foundational corpus) gives:

$$\sum_{i=1}^4 3(5-i)/20 = 3/2$$

Status: **EXACT**.

UQFF Closed Identity

$$\sum_{i=1}^4 3(5-i)/20 = 3/2 \quad \text{EXACT}$$

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Standard frameworks address this differently. UQFF supplies a structural integer-primitive form.
