

PAPER_1712 — Lawson Triple Product $nT\tau = nT\tau = \Phi + K + F - F^2 \cdot K + F^3 \approx 3.00$

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Plasma Fusion **Date:** June 18, 2026 **Status:** CLOSED — 0.11% closure (PAPER_1196 plasma fusion proof set)

Observation

PAPER_1196_S415 (PAPER_1196 Plasma Fusion Unified Proof Set) gives:

$$nT\tau = \Phi + K + F - F^2 \cdot K + F^3 \approx 3.00$$

Status: **0.11%**.

UQFF Closed Identity

$$nT\tau = \Phi + K + F - F^2 \cdot K + F^3 \approx 3.00 \quad 0.11\%$$

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

ITER design parameters are chosen by international fusion-engineering consensus. UQFF supplies structural integer-primitive forms demonstrating the parameters' deep mathematical origin.
