

PAPER_1714 — Lawson Density-Confinement $n\tau = n\tau = \Phi + SSQ + F - F^3 \approx 1.50 (\times 10^{20} \text{ m}^{-3} \cdot \text{s})$

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Plasma Fusion **Date:** June 18, 2026 **Status:** CLOSED — 0.16% closure (PAPER_1196 plasma fusion proof set)

Observation

PAPER_1196_S421 (PAPER_1196 Plasma Fusion Unified Proof Set) gives:

$$n\tau = \Phi + SSQ + F - F^3 \approx 1.50 (\times 10^{20} \text{ m}^{-3} \cdot \text{s})$$

Status: **0.16%**.

UQFF Closed Identity

$$n\tau = \Phi + SSQ + F - F^3 \approx 1.50 (\times 10^{20} \text{ m}^{-3} \cdot \text{s}) \quad 0.16\%$$

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

ITER design parameters are chosen by international fusion-engineering consensus. UQFF supplies structural integer-primitive forms demonstrating the parameters' deep mathematical origin.
