

PAPER_1720 — BH 4-Laws Prefactor (UQFF vs GR) = Prefactor = $K_{\text{MEX}} \times D_{\text{BSFG}} / D_{\text{phys}} = (25/12) \times 6/4 = 3.125$ EXACT

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** BH Thermodynamics **Date:** June 18, 2026 **Status:** CLOSED — EXACT closure (PAPER_122x-123x foundational Millennium-adjacent)

Observation

PAPER_1234 (PAPER_122x-123x broader corpus) gives:

Prefactor = $K_{\text{MEX}} \times D_{\text{BSFG}} / D_{\text{phys}} = (25/12) \times 6/4 = 3.125$ EXACT

Status: **EXACT**.

UQFF Closed Identity

Prefactor = $K_{\text{MEX}} \times D_{\text{BSFG}} / D_{\text{phys}} = (25/12) \times 6/4 = 3.125$ EXACT EXACT

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Standard frameworks address this differently. UQFF supplies a structural integer-primitive form.
