

PAPER_1733 — Canonical 100 s $\delta\tau$ Anchor = 100 s = canonical $\delta\tau$ ledger scaling (baryon weak-decay time normalization)

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** UQFF Foundational **Date:** June 18, 2026 **Status:** CLOSED — EXACT closure (PAPER_1240-1270 broader corpus)

Observation

PAPER_1254 (PAPER_1240-1270 broader corpus) gives:

100 s = canonical $\delta\tau$ ledger scaling (baryon weak-decay time normalization)

Status: **EXACT**.

UQFF Closed Identity

100 s = canonical $\delta\tau$ ledger scaling (baryon weak-decay time normalization) EXACT

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Standard frameworks address this differently. UQFF supplies a structural integer-primitive form.
