

PAPER_1735 — Neutron Lifetime Correction Term = $\delta\tau_n$ = $100 \cdot K \cdot D \cdot \Phi \cdot \Lambda \cdot N_{CH}$ = 45.97 s (Mexican-hat × resonance modulation)

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Particle Physics **Date:** June 18, 2026 **Status:** CLOSED — 0.06% closure (PAPER_1240-1270 broader corpus)

Observation

PAPER_1254 (PAPER_1240-1270 broader corpus) gives:

$$\delta\tau_n = 100 \cdot K \cdot D \cdot \Phi \cdot \Lambda \cdot N_{CH} = 45.97 \text{ s (Mexican-hat} \times \text{resonance modulation)}$$

Status: **0.06%**.

UQFF Closed Identity

$$\delta\tau_n = 100 \cdot K \cdot D \cdot \Phi \cdot \Lambda \cdot N_{CH} = 45.97 \text{ s (Mexican-hat} \times \text{resonance modulation)} \quad 0.06\%$$

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Standard frameworks address this differently. UQFF supplies a structural integer-primitive form.
