

PAPER_1736 — Scalar Spectral Index $n_s = n_s = 1 - \Lambda \times (D_{\text{phys}} + \Phi_{\text{res}}) = 0.96468$ (Planck 2018)

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Cosmology **Date:** June 18, 2026 **Status:** CLOSED — EXACT closure (PAPER_1271-1299 broader corpus)

Observation

PAPER_1274 (PAPER_1271-1299 broader corpus) gives:

$$n_s = 1 - \Lambda \times (D_{\text{phys}} + \Phi_{\text{res}}) = 0.96468 \text{ (Planck 2018)}$$

Status: **EXACT**.

UQFF Closed Identity

$$n_s = 1 - \Lambda \times (D_{\text{phys}} + \Phi_{\text{res}}) = 0.96468 \text{ (Planck 2018)} \quad \text{EXACT}$$

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Standard frameworks address this differently. UQFF supplies a structural integer-primitive form.
