Observation

PAPER_1277 (PAPER_1271-1299 broader corpus) gives:

$$U_i = \lambda_i \cdot (\rho_{SCm}/\rho_{UA}) \cdot \omega_s \cdot \cos(\pi t_n) \cdot (1+F_{TRZ}) = 2.75 \times 10^{-7} \quad (\text{Sun } t=0)$$

Status: **EXACT canonical**.

UQFF Closed Identity

$$U_i = \lambda_i \cdot (\rho_{SCm}/\rho_{UA}) \cdot \omega_s \cdot \cos(\pi t_n) \cdot (1+F_{TRZ}) = 2.75 \times 10^{-7} \quad (\text{Sun } t=0) \quad \text{EXACT canonical}$$

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Standard frameworks address this differently. UQFF supplies a structural integer-primitive form.
