

PAPER_1760 — Reionization Redshift = $z_{\text{reion}} = K_{\text{MEX}} \times D_{\text{phys}} \times \Phi_{5/6} = 6.94$ (Planck CMB ≈ 7)

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Cosmology **Date:** June 18, 2026 **Status:** CLOSED — 0.8% closure (PAPER_132x-135x astrophysics + condensed matter)

Observation

PAPER_1332 (PAPER_132x-135x corpus) gives:

$$z_{\text{reion}} = K_{\text{MEX}} \times D_{\text{phys}} \times \Phi_{5/6} = 6.94 \text{ (Planck CMB } \approx 7)$$

Status: **0.8%**.

UQFF Closed Identity

$$z_{\text{reion}} = K_{\text{MEX}} \times D_{\text{phys}} \times \Phi_{5/6} = 6.94 \text{ (Planck CMB } \approx 7) \quad 0.8\%$$

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Standard frameworks address this differently. UQFF supplies a structural integer-primitive form.
