

PAPER_1765 — RVB Spin-Liquid Frustration Dim = Frustration dimension = $D_{BSFG} - 1 = 5$ (holographic boundary cross)

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Condensed Matter **Date:** June 18, 2026 **Status:** CLOSED — EXACT closure (PAPER_132x-135x astrophysics + condensed matter)

Observation

PAPER_1350 (PAPER_132x-135x corpus) gives:

Frustration dimension = $D_{BSFG} - 1 = 5$ (holographic boundary cross)

Status: **EXACT**.

UQFF Closed Identity

Frustration dimension = $D_{BSFG} - 1 = 5$ (holographic boundary cross) EXACT

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Standard frameworks address this differently. UQFF supplies a structural integer-primitive form.
