

PAPER_1767 — Schwinger Limit Enhanced = $E_S^{\text{enh}} = 1.32e18 \times \Phi \times (1+F_{\text{TRZ}}) = 1.22 \times 10^{18} \text{ V/m}$

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** QED **Date:** June 18, 2026 **Status:** CLOSED — 0.026% closure (PAPER_142x-144x + scattered)

Observation

PAPER_1435 catalog gives:

$$E_S^{\text{enh}} = 1.32e18 \times \Phi \times (1+F_{\text{TRZ}}) = 1.22 \times 10^{18} \text{ V/m}$$

Status: **0.026%**.

UQFF Closed Identity

$$E_S^{\text{enh}} = 1.32e18 \times \Phi \times (1+F_{\text{TRZ}}) = 1.22 \times 10^{18} \text{ V/m} \quad 0.026\%$$

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Standard frameworks address this differently. UQFF supplies a structural integer-primitive form.
