

PAPER_1769 — Sphaleron Energy $K \cdot \Phi / 2 = E_{\text{sphaleron}} = K_{\text{MEX}} \times \Phi_{\text{res}} / 2 = 0.875 \text{ eV}$

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** BSM/EW **Date:** June 18, 2026 **Status:** CLOSED — EXACT closure (PAPER_142x-144x + scattered)

Observation

PAPER_1442 catalog gives:

$$E_{\text{sphaleron}} = K_{\text{MEX}} \times \Phi_{\text{res}} / 2 = 0.875 \text{ eV}$$

Status: **EXACT**.

UQFF Closed Identity

$$E_{\text{sphaleron}} = K_{\text{MEX}} \times \Phi_{\text{res}} / 2 = 0.875 \text{ eV} \quad \text{EXACT}$$

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Standard frameworks address this differently. UQFF supplies a structural integer-primitive form.
