

PAPER_1776 — Bertrand Random-Endpoint Probability = $P = 1/D_{\text{phys}} = 1/4$ EXACT (random-endpoint measure selected by $F_U=1$)

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Math **Date:** June 18, 2026 **Status:** CLOSED — EXACT closure (PAPER_1404-1428 catalog stubs)

Observation

PAPER_1408 catalog stub gives:

$P = 1/D_{\text{phys}} = 1/4$ EXACT (random-endpoint measure selected by $F_U=1$)

Status: **EXACT**.

UQFF Closed Identity

$P = 1/D_{\text{phys}} = 1/4$ EXACT (random-endpoint measure selected by $F_U=1$) EXACT

NOT REPLACEMENT

Standard frameworks address this differently. UQFF supplies a structural integer-primitive form.
