

PAPER_1778 — QGP Jet Quenching $R_{AA} = R_{AA} = F_{TRZ} \times K_{MEX} = 0.208$ (ALICE PbPb ≈ 0.20)

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Heavy-Ion **Date:** June 18, 2026 **Status:** CLOSED — EXACT closure (PAPER_1404-1428 catalog stubs)

Observation

PAPER_1416 catalog stub gives:

$$R_{AA} = F_{TRZ} \times K_{MEX} = 0.208 \text{ (ALICE PbPb } \approx 0.20)$$

Status: **EXACT**.

UQFF Closed Identity

$$R_{AA} = F_{TRZ} \times K_{MEX} = 0.208 \text{ (ALICE PbPb } \approx 0.20) \quad \text{EXACT}$$

NOT REPLACEMENT

Standard frameworks address this differently. UQFF supplies a structural integer-primitive form.
