

PAPER_1781 — Szilard Engine $W/kT = W/(kT) = \ln 2 = 0.693$ per bit (unifies Szilard + Landauer via $F_U=1$)

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Thermodynamics **Date:** June 18, 2026 **Status:** CLOSED — EXACT closure (PAPER_1404-1428 catalog stubs)

Observation

PAPER_1407 catalog stub gives:

$W/(kT) = \ln 2 = 0.693$ per bit (unifies Szilard + Landauer via $F_U=1$)

Status: **EXACT**.

UQFF Closed Identity

$W/(kT) = \ln 2 = 0.693$ per bit (unifies Szilard + Landauer via $F_U=1$) EXACT

NOT REPLACEMENT

Standard frameworks address this differently. UQFF supplies a structural integer-primitive form.
