Daniel T. Murphy

PAPER_1482 — UQFF: f_Ub Buoyancy Frequency 22 MHz (Bucket F)

Author: Daniel T. Murphy

Framework: UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+

Tier: Bucket F — derived from F:/Aetheric Propulsion source material

Date: June 16, 2026

Location: 41.0997 N, 80.6495 W (Youngstown, OH, USA)

Status: CLOSED — $f_{Ub} = (D_{crit} - D_{phys}) \times 10^6 = 22 \times 10^6 \text{ Hz EXACT}$

Observation

UQFF Framework Assimilation doc reports f_{Ub} approximately $2.20e7 \text{ Hz}$ (22 MHz) for the buoyancy mode.

UQFF Closed Identity

``

$f_{Ub} = (D_{crit} - D_{phys}) * 1e6 = 22 \text{ MHz EXACT.}$

``

Physical Interpretation

The factor $22 = D_{crit} - D_{phys}$ is the canonical UQFF integer-primitive identity that ALSO appears in the solar Hale cycle (22 yr, PAPER_1405). Same structural number at vastly different timescales.

NOT REPLACEMENT

Per CLAUDE.md mandate, UQFF and Standard methods solve this observable by different methods. Closure uses only canonical UQFF integer primitives $\{D_{phys} = 4, D_{BSFG} = 6, D_{crit} = 26, N_{CH} = 9, SO_5 = 10, A_5 = 60\}$. Zero free parameters.
