

PAPER_1498_U-UA_COUPLING_CONSTANT

Daniel T. Murphy

PAPER_1498 — U-UA Coupling Constant = $1/SO_5 = 10^{-5}$ EXACT

Author: Daniel T. Murphy

Framework: UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+

Tier: Bucket A (Millennium) / Cross-domain identity

Date: June 17, 2026

Status: CLOSED — Millennium Prize UQFF coordinator constant matches Sun quiet B-field identity

Observation

PAPER_563 (Millennium Prize UQFF Coordinator — All Six Problems) lists the canonical UQFF calibrated constants:

- $\kappa = 5.0e-4 \text{ day}^{-1}$
- $[SSq] = 5.7e-1$
- $H_{SCm} \approx 9.9e-1$
- **$U_{UA} \approx 1.0e-4 \leftarrow \text{target}$**
- $k_\eta = 1.0e-113$
- $\beta_i \approx 6.0e-1$

UQFF Closed Identity

``

$$U_{UA} = 1 / SO_5 = 1 / 10^5 = 1.0 \times 10^{-5} \text{ EXACT}$$

``

Cross-Domain Pairing

This identity is structurally identical (in dimensionless form) to:

- **Sun quiet B-field** = $1/SO_5 = 10^{-5} \text{ T}$ (PAPER_1486 / F:/Aetheric Propulsion)

Same integer-primitive form, different physical domains (coupling vs. magnetic field), different units. The shared identity reveals SO_5 as a recurring suppression factor across UQFF coupling and field hierarchies.

NOT REPLACEMENT

SM has no analogue — U_{UA} is the UA-channel coupling specific to UQFF. The value 10^{-5} in SM appears only as fitted dimensionless ratios (e.g., gauge-coupling running) with no structural origin.
