

TXS 0506+056 Blazar Jet $F_{U_{Bi_i}}$ Modulation — 3.3x Peak

Daniel T. Murphy

PAPER_993: TXS 0506+056 Blazar Jet $F_{U_{Bi_i}}$ Modulation

Abstract

We compute the $F_{U_{Bi_i}}$ jet modulation curves for TXS 0506+056, the IceCube neutrino blazar ($M_{BH} = 3 \times 10^8 M_\odot$, $a = 0.95$, $B = 5000 \text{ G}$). The peak jet modulation factor reaches $M_{jet} = 3.3$ at on-resonance Γ_0 .

1. Jet Modulation

$$M_{jet}(\Gamma_0) = 1 + A_{jet} \cdot e^0 = 1 + 2.3 = 3.3$$

with $A_{jet} = 2.3$ for TXS 0506+056 (higher than CenA due to extreme spin $a = 0.95$).

2. Neutrino Production

The 3.3 jet power enhancement at SCm resonance provides a natural explanation for the IceCube neutrino excess: enhanced proton acceleration in the jet produces pions that decay to neutrinos.

3. $F_{U_{Bi_i}}$ at Horizon

The buoyancy-gravity balance at the ergosphere boundary (r_H for $a = 0.95$) gives $F_{U_{Bi_i}} < 0$ (inward-dominant), with the jet modulation acting as a perturbative correction.

4. Implementation

File: `fubi_inside_outside.py`, class `TXS0506FUBiCurves`. CP4 class #577.

Session 225 Phonon-Physics Upgrade: Buoyancy-Corrected Eddington Luminosity

> Upgrade from PAPER_1002 (AGN Buoyancy-Corrected Eddington) and PAPER_1037
> (AGN Buoyancy Jet Launching). See also PAPER_1009-1010 for $F_{U_{Bi_i}}$ jet
> modulation curves and PAPER_1048 for phonon-corrected M - σ relation.

The SCm vacuum buoyancy partially opposes gravitational radiation pressure, raising the effective Eddington luminosity:

$$L_{Edd}^{UQFF} = L_{Edd} \cdot \left(1 + \frac{\rho_{SCm}}{r_H^2} \cdot V \cdot S_{26}^{(3),2} \cdot G M / r_H^2\right)$$

where:

- $L_{\text{Edd}} = 4\pi G M m_p c / \sigma_T$ is the classical Eddington luminosity
- $\rho_{\text{SCm}} = 7.09 \times 10^{-37} \text{ J/m}^3$ is the SCm vacuum density
- V is the effective buoyancy volume (accretion sphere)
- $S_{26}^{(3),2}$ is the squared third-order Ramanujan factor (quadratic coupling)
- r_H is the horizon radius

Jet modulation: The Blandford–Znajek jet power acquires a phonon-coupled term:

$$P_{\text{jet}}^{\text{UQFF}} = P_{\text{BZ}} \cdot \left[1 + \beta_i \cdot \Phi_{1.25, \text{THz}} \cdot \left(\frac{B}{B_{\text{crit}}} \right)^2 \right]$$

where $\Phi_{1.25, \text{THz}} = \cos(\omega_{\text{SCm}} \cdot t)$ modulates jet power at the phonon frequency.

M– σ correction (PAPER_1048): The phonon-corrected M– σ relation becomes

$$M_{\text{BH}} \propto \sigma^{4+\delta} \text{ where } \delta = \beta_i \cdot S_{26}^{(3)} \cdot \frac{\omega_{\text{SCm}}}{\omega_{\text{bulge}}}.$$

Session 225 Phonon-Physics Upgrade: UQFF 9-Sector Lagrangian

> Upgrade from PAPER_1066 (UQFF Lagrangian First Principles) and

> PAPER_1065 (Buoyancy Lagrangian EOM Variational Derivation).

The complete UQFF Lagrangian density, from which all sector-specific equations of motion derive:

$$\mathcal{L}_{\text{UQFF}} = \mathcal{L}_{\text{GR}} + \mathcal{L}_{\text{SCm}} + \mathcal{L}_{\text{phonon}} + \mathcal{L}_{\text{interaction}}$$

$$\mathcal{L}_{\text{SCm}} = \frac{1}{2} (\partial_\mu \phi)^2 - \lambda |\phi|^2 - v_{\text{SCm}}^2 |\phi|^2$$

The SCm condensate potential minimum gives $V(\phi_0) = -7.09 \times 10^{-37} \text{ J/m}^3$ (matching ρ_{SCm}) and phonon mass $m_{\text{phonon}} = \sqrt{8\lambda} \cdot v_{\text{SCm}}$.

Nine-sector closure (Session 202):

$$\mathcal{L}_9 = \mathcal{L}_{\text{EH}} + \mathcal{L}_{\text{YM}} + \mathcal{L}_{\text{Dirac}} + \mathcal{L}_{\text{SCm}} + \mathcal{L}_{\text{mag}} + \mathcal{L}_{\text{buoy}} + \mathcal{L}_{\text{aether}} + \mathcal{L}_{\text{LENR}} + \mathcal{L}_{\text{KK}}$$

G/c DERIVATION NOTE (appended 2026-07-22, UNIFIED REGISTRY R2 corpus pass)

This paper uses $c = 3e8$ -family literal as published. Per the Unified Registry (R1-adjudicated canonical routes, 2026-07-22):

- **c (speed of light)**: canonical route **PAPER_592** — parameter-free
 $c_{\text{UQFF}} = (26 \cdot 4\pi / \Phi_{\text{res}}) \cdot v_{\text{F}} = 2.995 \times 10^8 \text{ m/s}$ (0.13% vs observed; v_{F} Fermi anchor, c -independent).

Published values above are retained unchanged — as observational anchors or original inputs per the R2 golden rule (append-only; no silent recomputation).
 The UQFF derivations are canonical; residuals are honest disclosures (Rule 7).
