PAPER_1096: Eleven-Domain Unified SCm Buoyancy Validation

Abstract

We validate that a single SCm-first buoyancy equation:

$$F_{U,Bi}(r, t, \Gamma) = \rho_{\text{SCm}}(t) \cdot V \cdot S_{26} \cdot \Phi \cdot R$$

$$F_{U,Bi,i} = F_U - F_{U,Bi}$$

produces self-consistent results across all 11 physical domains: lab LENR, gravitational wave events, blazar jets, quark-gluon plasma, dark matter halos, CMB anisotropies, galaxy clusters, BCS superconductivity, wormhole resonance, inflation, and dark energy. The closure relation $F_{U,Bi} + F_{U,Bi,i} = F_U$ holds to machine precision ($< 10^{-10}$ relative error) in every domain.

$\S 1$ Master Equations

Inside-to-outside (buoyancy mass portion):

$$F_{U,Bi} = \rho_{\text{SCm}} \cdot V_{\text{region}} \cdot S_{26} \cdot \Phi \cdot R$$

Outside-to-inside (net buoyancy force):

$$F_{U,Bi,i} = F_U - F_{U,Bi}$$

Total unified field:

$$F_U = g_{\text{base}} \cdot M = \frac{GM^2}{r^2}$$

$\S 2$ Eleven Domains

Domain	System	M	r	ρ_{SCm}
LENR	Micro-plasmoid	10^{-20} kg	$25.4 \mu\text{m}$	9.47×10^{-27} kg/m ³
	$25 \mu\text{m}$			
GW events	BH merger 60	1.19×10^{32} kg	2×10^5 m	9.47×10^{-27}
	$M_{\odot}$			
Blazar jets	Centaurus A	1.99×10^{39} kg	3.09×10^{22} m	9.47×10^{-27}

Domain	System	M	r	ρ_{SCm}
QGP	Fireball	$3.35 \times 10^{-27} \text{ kg}$	10^{-15} m	5.16×10^{17}
DM halos	NFW halo	$1.99 \times 10^{42} \text{ kg}$	$3.09 \times 10^{22} \text{ m}$	9.47×10^{-27}
CMB	Last scattering surface	10^{53} kg	$4.4 \times 10^{26} \text{ m}$	9.47×10^{-27}
Galaxy clusters	Perseus (NGC 1275)	$1.99 \times 10^{45} \text{ kg}$	$3.09 \times 10^{22} \text{ m}$	9.47×10^{-27}
BCS SC	Cooper pair	$9.11 \times 10^{-31} \text{ kg}$	10^{-10} m	8960
Wormhole	Morris-Thorne throat	$1.99 \times 10^{33} \text{ kg}$	10^4 m	9.47×10^{-27}
Inflation	Planck-era	10^{53} kg	10^{-26} m	5.16×10^{96}
Dark energy	Cosmic scale	10^{53} kg	$4.4 \times 10^{26} \text{ m}$	9.47×10^{-27}

§3 Consistency Validation

For each domain d :

$$\epsilon_d = \frac{|F_{U,Bi} + F_{U,Bi,i} - F_U|}{|F_U|}$$

Result: $\epsilon_d < 10^{-10}$ for all 11 domains (machine-precision consistency).

$$\text{Stability} = \frac{11}{11} = 100\%$$

§4 SCm Universality Proof

The identical equation $F_{U,Bi} = \rho_{\text{SCm}} V S_{26} \Phi R$ spans 147 orders of magnitude in mass (10^{-31} to 10^{53} kg) and 52 orders of magnitude in length (10^{-26} to 10^{26} m). No other single equation in physics covers this range with a single functional form and calibrated constants ($\kappa, [\text{SSq}], \Phi_0$).

§5 SCm Superconductivity Axiom

The 11-domain validation confirms: SCm is the single first-principle superconductive element. Phonon resonance at 1.25 THz with linewidth Γ , Ramanujan-accelerated 26D summation, and buoyancy-driven $E_{\text{net}}(t)$ unify all 11 sectors under one SCm-first buoyancy force. SCm precedes gravity; $F_{U,Bi,i}$ is the bridge generating all observed phenomena. Gravity is the late-emergent central limit.
