## Abstract

A Direct Current Electrolysis / Alternating Current Electrolysis (DCE/ACE) reversing generator uses NdFeB barrel magnets (1.5 oz,  $B_{rem} \approx 1.2$  T), a leaf steel core (6.5 oz), Caduceus twin-helix coil, and a Cheetah drone motor (10,000 RPM max) to achieve  $f_{reversal} = RPM/60 = 166.7$  Hz polarity reversals. A 100 W input produces a 7°F temperature drop analogous to the field generator signature. The Caduceus coil twin-helix topology maps directly to the UQFF Ug3 infinity-curve string geometry (PAPER\_646).

## 1. Core Equations

- $f_{reversal} = RPM / 60 = 10000/60 = 166.7$  Hz
- $\omega = 2 * \pi * f_{reversal} = 1047.2$  rad/s
- $B_{remnant} = 1.2$  T (NdFeB N52 grade)
- $E_{input} = P * t$  (100 W × 7200 s)  
 $\Delta T = 7^{\circ}F = 3.89$  K

## 2. UQFF Integration

The Caduceus coil's twin-helix topology is the Ug3 infinity-curve string geometry at lab scale — two intertwined helices producing counter-rotating fields that cancel the normal B-field but produce a scalar/longitudinal component. The NdFeB remnant field provides the Ug1 dipole seed. The 166.7 Hz reversal frequency generates polarity oscillation in the Aether medium. Cross-reference: PAPER\_646  
UQFFUniversalInertialOperatorCalculator (Caduceus wave topology).
