1. Abstract

The Unified Quantum Force Field (UQFF) framework consists of three coequal Master Universal Equation Systems that must be solved **simultaneously** to construct a complete quantum force diagram of the universe. These three systems — UQFF Compressed (gravitational), UQFF Resonant (oscillatory), and UQFF Buoyancy (U_{Bi}, superconducting counterforce) — are distinct, non-substitutable, and complementary. No single system can replace another; together they provide the total quantum force picture of any astrophysical body or scale.

2. The Three Master Equation Systems

2.1 System 1 — UQFF Compressed (Gravitational)

$$FU_{g1} = \sum_{k=1}^N [k_k * (f_{UA'1} * f_{SCm1} * R_{EB1}) * (f_{UA'2} * f_{SCm2} * R_{EB2}) / r^2 * G_k(UA, Ub, \nu_{THz}, geometry_k)]$$

Variables: - $f_{UA'}$ = 0.999 (Aether component) - f_{SCm} = 0.001 (superconductive material) - $R_{EB} = k_R * Z$ (electrostatic barrier * atomic number, $k_R=1$) - r = characteristic system radius (m) - ν_{THz} = $1e12$ Hz (THz hole resonance) - $G_k = \sin(\theta)$ for spherical, $\cos(\phi)$ for toroidal, $f(\nu_{THz})$ for linear geometry

Purpose: Models gravitational buoyancy interactions across 26 quantum states. Replaces Newton's G with DPM-mediated E_{DPM} energy density.

2.2 System 2 — UQFF Resonant (Oscillatory)

$$R(t) = \sum_{i=1}^{26} [R_{Ug1,i} * \cos(U_{g1,i} * t) \\ + R_{Ug2,i} * \cos(U_{g2,i} * t) \\ + R_{Ug3,i} * \cos(U_{g3,i} * t) \\ + R_{Ug4i,i} * \cos(U_{g4i,i} * t)]$$

Variables: - $R_{Ug1,i} = U_{g1,i} * (1 + M_{sf}(t))$ - $R_{Ug2,i} = U_{g2,i} * (1 + M_{sf}(t))$ - $R_{Ug3,i} = U_{g3,i} * (1 - T_{lock}(t))$ - $R_{Ug4i,i} = U_{g4i,i} * (1 + f_{Um,i})$ - $\omega_{Ug1,i} = 2\pi / (T_{sf} / i)$ where T_{sf} is star-formation cycle - $\omega_{Ug2,i} = 2\pi / (T_{shell} / i)$ - $\omega_{Ug3,i} = 2\pi / (T_{sweep} / i)$ - $\omega_{Ug4i,i} = 2\pi / (T_{THz} / i) = 2\pi / (1e-12 / i)$

Purpose: Captures creative/stabilizing resonance across all scales. Resonance is the constructor and sustainer of orbital patterns, star formation cycles, and ring dynamics.

2.3 System 3 — UQFF Buoyancy / U_Bi (Superconducting Counterforce)

$$F_{U_Bi} = \sum_{k=1}^N [k_{\{Ub,k\}} * (f_{UA'} * f_{SCm} * R_{EB}) / r^2 \\ * H_k(THz, U_b, geometry_k) * f_{Ub}]$$

Variables: - $k_{\{Ub,k\}} = 0.1$ (buoyancy coupling constant per state k) - $H_k = \cos(\phi_k) * f(v_{THz})$ (superconductivity modulation) - ϕ_k = geometry angle for state k (0 to 2π across 26 states) - $f(v_{THz}) = 1$ (unit THz response, calibration-table dependent) - $f_{Ub} \propto \Delta k_{\eta}$ (calibration difference = imaginary/quantum buoyancy deviation) - Galaxy-scale: $f_{Ub} \propto 10^9$ - Stellar-scale: $f_{Ub} \propto 10^7$ - Planetary/atomic-scale: $f_{Ub} \propto 10^5 - 10^6$

Purpose: The massless, superconducting quantum counterforce to the gravitational component. U_Bi models the universal buoyancy that keeps all bodies afloat in their respective environments, from atoms to galaxies.

3. Interconnection: Di-Pseudo-Monopole (DPM) Foundation

All three systems are grounded in the DPM:

$$DPM = UA' + SCm$$

- **UA'** = Universal Aether component (non-local connectivity)

- **SCm** = Super Conductive Material (superconductive magnetism, [SCm] $\approx 10^{-5} * i^2$ T at quantum state i)

DPM mediates all four forces (U_g1-U_g4i) and is the coherent nuclear cell common to every atom and every astrophysical body.

4. E_DPM — Gravity Without G

Newton's gravitational constant G is replaced by energy-based DPM action:

$$E_{DPM,i} = (\hbar * c / r_i^2) * Q_i * [SCm]_i$$

$r_i = r/i$ (quantum state-scaled radius)
 $Q_i = i$ (quantum state factor, $i = 1..26$)
 $[SCm]_i = 1e-5 * i^2$ T
 $\hbar = 1.0546e-34$ J·s
 $c = 3e8$ m/s

State i	r_i (for $r=4.73e16$ m)	$E_{DPM,i}$ (m/s ²)
1	4.73e16 m	1.412e-39
13	3.638e15 m	7.25e-37
26	1.819e15 m	1.669e-27

5. 26-State Quantum Density Variables

Each quantum state i carries its own vacuum energy density:

$_{vac},[UA'],i = 7.09e-36 * i$ J/m³ (Aether vacuum density)
 $_{vac},[SCm],i = 7.09e-37 * i$ J/m³ (SCm vacuum density)
 ratio: $_{UA}/_{SCm} = 10$ (constant across all states)
 $(1 + _{UA},i / _{SCm},i) = 11$ (universal amplification factor)

6. Simultaneous Solution Output

For any astrophysical system at radius r, time t:

$$\text{Total UQFF force} = F_{U_g1}(r,t) + R(t) + F_{U_{Bi}}(r,t)$$

Where:

$$F_{U_g1} = \sum_{i=1}^{26} (U_{g1,i} + U_{g2,i} + U_{g3,i} + U_{g4,i}) \quad [\text{gravitational}]$$

$$R(t) = \sum_{i=1}^{26} \text{(resonant oscillatory terms)} \quad [\text{resonant}]$$

$$F_{U_Bi} = \sum_{k=1}^{26} \text{(buoyancy counterforce terms)} \quad [\text{buoyant}]$$

Together these three form the **complete quantum force diagram** — attractive, repulsive, and buoyant forces all accounted for within one unified model.

7. Physical Interpretation

Force Component	Role	Scale
FU_g1 (Compressed)	Gravitational buoyancy, star formation, orbital dynamics	Atomic to galactic
R(t) (Resonant)	Stabilizing creation cycles, ring gaps, THz-driven oscillation	All scales
F_U_Bi (Buoyancy)	Superconducting quantum counterforce, imaginary/quantum space	All scales

Resonance is not destructive; it is the **alfa and the omega** — creator and sustainer. The universe is held together by Energy, Frequency, and Resonance, not by Einsteinian spacetime curvature.
