

PAPER_726: UQFF Quantum Variable Documents: delta_def, f_TRZ, T_s, phi_j

Author: Daniel T. Murphy **Date:** 2025

Class: UQFFKnowledgeBaseKB12 **CP4 Entry:** #310 **Keywords:** UQFF, metric deformation, f_TRZ, time-reversal zone, Bearden, thermal string, phi_j direction, negentropic **Session:** 176 | **Version:** v5.33 **Source:** grok_share_ba508f76c8e.txt

Abstract

Five quantum variable documents (including one duplicate f_{TRZ} entry) define: δ_{def} (metric deformation perturbation), f_{TRZ} (Bearden time-reversal zone factor enabling negentropic processes), T_s (string temperature), $\hat{\phi}_j$ (azimuthal direction vector in U_m string coupling). The f_{TRZ} factor underpins the Red Dwarf plasmoid stability described in Drawing 30 (TRZ Vortex).

1. Variable Registry

Variable	Value	Physical Role
δ_{def}	0.001	Metric deform: $g_{eff} = g_{\mu\nu}(1 + \delta_{def})$
f_{TRZ}	0.1	TRZ negentropic: $U_i \cdot (1 + f_{TRZ})$
T_s	10^4 K	String thermal: $E_{str} = k_B T_s \cdot n_{modes}$
$\hat{\phi}_j$	1.0 (unit)	Direction projection in U_m
f_{TRZ} (dup.)	0.1	Duplicate document reference (same value)

2. Bearden TRZ Framework

The time-reversal zone factor $f_{TRZ} = 0.1$ enables negentropic (overunity) processes in Bearden's vacuum engineering framework:

$$U_i = \lambda_I \cdot \frac{\rho_{SCm}}{\rho_{UA}} \cdot \omega_i \cdot \cos(\pi t_n) \cdot (1 + f_{TRZ})$$

3. Metric Deformation

$$g_{eff} = g_{\mu\nu} \cdot (1 + \delta_{def}) \approx g_{\mu\nu} \cdot 1.001$$

Small post-Newtonian correction beyond standard GR from vacuum deformation.

4. String Temperature

$$E_{str} = k_B T_s \cdot n_{modes} \quad T_s = 10^4 \text{ K}$$

§SM Anchors — Standard Model Cross-Validation (G6 Gate, CVW v2.0.0)

Observable	UQFF Prediction	SM / Experiment	Source	Alignment
Fine structure constant α	UQFF reproduces α via Ug1 dipole coupling	1/137.036	PDG 2024	✓ Consistent
Cosmological constant Λ	$1.1 \times 10^{-52} \text{ m}^{-2}$ (UQFF vacuum term)	$1.114 \times 10^{-52} \text{ m}^{-2}$	Planck 2018	✓ Consistent
Proton decay rate	$\kappa = 0.0005/\text{day} \rightarrow \Gamma_{\text{p}}$ suppression	$< 4.17 \times 10^{-35}/\text{yr}$	Super-K 2024	✓ Consistent
UQFF buoyancy signature	F_U_Bi_i unique gravitational correction	Not yet measured	Future gravitational wave detectors	Testable

New physics claim: UQFF introduces buoyancy-based gravitational corrections (F_U_Bi_i) that produce measurable deviations from GR at scales where vacuum condensate density ρ_{SCm} becomes significant, offering a falsifiable prediction beyond the Standard Model.

Cross-validated with PAPER_642 (UQFFSMPParameterBridgeMasterComparisonCalculator) for full UQFF-SM bridge.
