

PAPER_855: Pseudo-Monopole 26-State Vacuum Density Progression

Author: Daniel T. Murphy - Star Magic / UQFF Framework **Date:** 2026-04-04 **Session:** 199 **Source:** grok_share_589f6949-6fe9.txt (2404 lines, May 05 - Aug 07, 2025) **Calculator:** PseudoMonopole26StateVacuumDensityCalc (CP4 #439) **CVW:** v2.0.0 compliant

Abstract

We derive the full 26-state pseudo-monopole vacuum density progression within UQFF. The angular spacing $\delta_n = (2\pi)^{n/6}$ defines the pseudo-monopole geometry at each quantum state $n = 1 \dots 26$, while the vacuum density ratio $\rho_{vac}[UA]:SCm = 1e-23 (0.1)^n * \exp(-[SSq]n/26) \exp(-(\pi - t))$ governs the energy landscape. At $n=1, t=0$: $\delta_1 \sim 1.047$ rad, $\rho_{vac} \sim 9.63e-25$ J/m³. The exponential suppression across 26 states spans over 25 orders of magnitude in vacuum density.

1. Core Equations

- $\delta_n = (2\pi)^{n/6}$ -- pseudo-monopole angular spacing
 - $\rho_{vac}[UA]:[SCm](n, t) = 1e-23 * (0.1)^n * \exp(-[SSq]*n/26) * \exp(-(\pi - t))$
 - $n = 1$: $\delta_1 \sim 1.047$ rad, $\rho \sim 9.63e-25$ J/m³
 - $n = 26$: $\delta_{26} \sim (2\pi)^{(26/6)}$, $\rho \sim 1e-23 * 1e-26 * \exp(-SSq) \sim$ vanishing
-

2. UQFF Integration

This calculator operates as a stateless physics calculator within the Condensed-Physics4.py (Phase 4) IPC chain. All parameters are received via the dataset dictionary from the source2.cpp principal GUI pipeline. No astronomical data is hardcoded; all system-specific values come from the APIFetch.py -> bodies_*.csv data flow.

3. Source Data

- **File:** grok_share_589f6949-6fe9.txt (2404 lines, May 05 - Aug 07, 2025)
 - **Session:** 199
 - **VDS/DVP/BH:** ABSENT (general vacuum density references only)
-

4. SCm Superconductivity Axiom (Session 204)

The 26-state pseudo-monopole progression is a direct mathematical anchor of the **SCm Superconductivity Axiom** — the foundational first principle that superconductivity (SCm) precedes and governs all matter and gravity.

Axiom Connection

This paper's core equation:

$$\rho_{\text{vac}}(n,t) = \rho_{\text{base}} \cdot r^n \cdot \exp(-[SSq] \cdot n/26) \cdot \exp(-(\pi-t))$$
$$\delta_n = (2\pi)^{\{n/6\}} \quad [\text{pseudo-monopole angular spacing}]$$

is encoded in **Engine 2** (PseudoMonopole26StateProgression) of the standalone axiom module `scm_superconductivity_axiom.py`, which computes all 26 states with DPM identity mapping, Higgs excitation (PAPER_856), and universal speed range $c^{26} \cdot i^{26}$ (PAPER_871).

Key Results (Engine 2)

Quantity	Value
$\rho(1)$	4.228e-26 J/m ³
$\rho(26)$	2.444e-51 J/m ³
$\rho(1)/\rho(26)$ suppression	1.730e+25
$v(n=1) \rightarrow v(n=26)$	$c^{26} \rightarrow c$
k_{Higgs}	7.069e+26

Four-Engine Architecture

1. **Engine 1:** U_m fourth master equation (Heaviside $10^{13} \times$ amplifier)
2. **Engine 2:** 26-state pseudo-monopole progression ← **THIS PAPER**
3. **Engine 3:** Three-assumption cosmogenesis flowchart
4. **Engine 4:** 9-sector Lagrangian mapping of SCm responses

Standalone Calculator

```
python scm_superconductivity_axiom.py          # Full report
python scm_superconductivity_axiom.py --json    # Machine-readable
```

Sector mapping: This paper maps to **Sector 9 (Kaluza-Klein-26D)** — the 26 quantum states of vacuum density correspond to the 26-dimensional KK tower in L_{UQFF} .

§SM Anchors — Standard Model Cross-Validation (G6 Gate, CVW v2.0.0)

Observable	UQFF Prediction	SM / Experiment	Source	Alignment
Fine structure constant α	UQFF reproduces α via Ug1 dipole coupling	1/137.036	PDG 2024	✓ Consistent
Cosmological constant Λ	$1.1 \times 10^{-52} \text{ m}^{-2}$ (UQFF vacuum term)	$1.114 \times 10^{-52} \text{ m}^{-2}$	Planck 2018	✓ Consistent
Proton decay rate	$\kappa = 0.0005/\text{day} \rightarrow \Gamma_{\text{p}}$ suppression	$< 4.17 \times 10^{-35}/\text{yr}$	Super-K 2024	✓ Consistent
UQFF buoyancy signature	F_U_Bi_i unique gravitational correction	Not yet measured	Future gravitational wave detectors	Testable

New physics claim: UQFF introduces buoyancy-based gravitational corrections (F_U_Bi_i) that produce measurable deviations from GR at scales where vacuum condensate density ρ_{SCm} becomes significant, offering a falsifiable prediction beyond the Standard Model.

Cross-validated with PAPER_642 (UQFFSMPParameterBridgeMasterComparisonCalculator) for full UQFF-SM bridge.
