

# PAPER\_717: Red Dwarf Compression E: Hydrogen Pages 85-88 and 26-Level Quantum Wave

**Class:** UQFFKnowledgeBaseKB2 **CP4 Entry:** #301 **Keywords:** UQFF, compressed space energy, Earth-Moon tidal, hydrogen radial probability, 26-level quantum wave, di-pseudo-monopole **Session:** 176 | **Version:** v5.33 **Source:** grok\_share\_ba508f76c8e.txt

## Abstract

Doc 43.e (Red Dwarf Compression\_E) extends the hydrogen series to pages 85-88, deriving compressed space energy  $E_{space}$ , an Earth-Moon tidal analogy using di-pseudo-monopole fields, hydrogen radial probability energies  $E_{1s}$  and  $E_{3d}$ , and the 26-level quantum wave energy  $E_k(t)$  that maps atomic orbital time scales to galactic orbital periods.

## 1. Compressed Space Energy

$$E_{space} = E_0 \cdot \text{Spatial}_f \cdot \text{Compression} \cdot \text{Layers} \cdot f_{Higgs} \cdot t_{prec} \cdot Q_{scale}$$

with  $E_0 = 1.683 \times 10^{-37}$  J (aether base),  $f_{Higgs} = 8 \times 10^{-34}$ ,  $t_{prec} = 6.183 \times 10^{-13}$ :

$$E_{space} \approx 5.52 \times 10^{-104} \text{ J}$$

## 2. Earth-Moon Tidal Analogy

Di-pseudo-monopole (SCm:UA') field analogy to Earth-Moon tidal system:

$$E(t) = E_{aether} \cdot V \cdot \frac{B_{pseudo}^2}{2\mu_0 E_{aether}} \cdot \sin\left(\frac{2\pi t}{T}\right) \cdot f_{spatial}$$

with  $B_{pseudo} = 1$  T,  $T = 2.36 \times 10^6$  s (orbital period),  $f_{spatial} = 2$ :

$$E(T/4) \approx 7.96 \times 10^{-22} \text{ J (UQFF)}$$

UQFF/SM calibration ratio:  $\sim 10^{38}$ - $10^{39}$  (SCm:UA di-pseudo-monopole vs SM tidal).

## 3. Hydrogen Radial Probability

Energies at quarter-period for principal quantum states: | State |  $E(T/4)$  | |----|-----|  
|  $n = 1, l = 0$  (1s) |  $3.98 \times 10^{-22}$  J | |  $n = 3, l = 2$  (3d) |  $1.99 \times 10^{-22}$  J |

$$E_{nlm}(t) = E_{aether} \cdot V \cdot \frac{B_{pseudo}^2}{2\mu_0 E_{aether}} \cdot |\psi_{nlm}|^2 r_{max}^2 \cdot \sin\left(\frac{2\pi t}{T}\right)$$

## 4. 26-Level Quantum Wave

$$E_k(t) = E_{aether} \cdot V \cdot \frac{B_{pseudo}^2}{2\mu_0 E_{aether}} \cdot |Y_{lm}|^2 \cdot \sin\left(\frac{2\pi t}{T_k}\right)$$

where  $T_k = \frac{k}{26} \cdot T_{Earth-Moon}$  links atomic timescales to galactic rotation.

| Level $k$ | $T_k$ (s)          | $E_k(T_k/4)$ (J)       |
|-----------|--------------------|------------------------|
| 1         | $9.08 \times 10^4$ | $5.31 \times 10^{-23}$ |
| 6         | $5.45 \times 10^5$ | $2.37 \times 10^{-22}$ |

Spherical harmonics used:  $|Y_{0,0}|^2 \approx 0.0796$ ,  $|Y_{2,\pm 2}|_{max}^2 \approx 0.596$ .
