

SCm Vacuum Manifold — Primordial First-Principle Derivation

Daniel T. Murphy — Clean Thread 27FEB2026_A.docx

April 24, 2026

1 SCm Vacuum Manifold (Pre-Gravity First Principle)

The primordial “matter” is the superconducting vacuum manifold:

$$\rho_{vac,SCm} = \rho_{vacSCm}$$

Negative-time modulation:

$$\cos(\pi t_n) = \cos(\pi t_n)$$

Buoyancy force (long-form integral):

$$\int_0^\infty \left(-F_0 + \frac{GM}{r^2} + U_{UA} \rho_{vacSCm} \cos(\pi t_n) \right) dr$$

26D Vacuum Density Series:

$$\sum_{n=1}^{\infty} \frac{\left(\frac{57}{100}\right)^n}{n^{26}}$$

Phonon activation at 1.25 THz:

$$e^{-\frac{(\omega - 1250000000000.0)^2}{2\Gamma^2}}$$

Primordial split via $E_{net}(t, \Gamma)$:

$$E_{net}(t_n, \Gamma)$$

2 Comparison to Holmlid Rydberg Matter

Ultra-dense D(−1): $d = 2.3 \pm 0.1$ pm, density 10^{29} cm^{−3}, KER = 630 eV. SCm supplies the stabilizing $F_{U,Bi,i}$ and phonon background.

3 Refined Proof Fragment Outline (Riemann + Cosmogenesis)

1. SCm Vacuum Manifold (1 page)
2. Primordial Split & Cosmic Quantum Egg (0.5 page)
3. Holmlid Rydberg Bridge (0.5 page)
4. Riemann Closure via SCm (1 page)
5. Numerical Validation (0.5–1 page)
