Version: v5.29

Status: Complete — CP4 #253 | UQFF Session 172

Abstract

We compute the UQFF-modified gravitational wave strain h_{UQFF} for the GW150914 binary black hole merger and compare to LIGO observation. UQFF introduces a $\sim 10\%$ strain suppression and a small phase shift controlled by κ and f_{TRZ} .

1. GW150914 Parameters

- $m_1 = 36 M_{\odot}$, $m_2 = 29 M_{\odot}$
- $d = 410 \text{ Mpc}$
- $f_{\text{peak}} = 150 \text{ Hz}$, $h_{\text{obs}} \approx 10^{-21}$

2. Chirp Mass

$$\mathcal{M}_c = \frac{(m_1 m_2)^{3/5}}{(m_1 + m_2)^{1/5}} \approx 28.3 M_{\odot}$$

3. Standard Strain

$$h_{GR}(f) = \frac{4}{d} \left(\frac{G \mathcal{M}_c}{c^2} \right)^{5/3} (\pi f)^{2/3} / c$$

4. UQFF Modifications

$$S_{SCm}(f) = \exp(-\rho_{SCm} \lambda_{GW}), \quad \lambda_{GW} = c/f$$

$$h_{UQFF}(f) = h_{GR}(f) \cdot (1 - f_{\text{TRZ}}) \cdot S_{SCm}(f) \cdot \exp\left(-\frac{U_m \omega}{c^2}\right)$$

5. Phase Shift

$$\phi_{UQFF}(t) = 2\pi f t + \kappa f_{\text{TRZ}} t$$

Small but potentially measurable with future detectors (Einstein Telescope).

6. Frequency Evolution

$$\frac{df}{dt} = \frac{96}{5} \pi^{8/3} \frac{(G \mathcal{M}_c)^{5/3}}{c^5} f^{11/3}$$

7. C++ Module
