

# PAPER\_712: Pillars of Creation M16 Variant 2: Post-Supernova Shock UQFF

**Class:** PillarsOfCreationM16v2UQFF **CP4 Entry:** #296 **Keywords:** Pillars of Creation, M16, post-supernova, shockwave, protostar jets, 450000 mph, UQFF **Session:** 175 | **Version:** v5.32 **Source:** grok\_share\_ba508f76c8e.txt

## Abstract

A variant analysis of the Pillars of Creation incorporating the predicted supernova scenario (estimated to have detonated  $\sim 8000$  yr ago, with the shockwave expected to reach us in  $\sim 1000$  yr). This analysis also includes the protostellar jets at  $\sim 450,000$  mph ( $2 \times 10^5$  m/s) that are observed in the pillar tips.

## 1. System Parameters

| Parameter      | Value                    | Description                 |
|----------------|--------------------------|-----------------------------|
| $M_0$          | $10100M_{\odot}$         | Initial pillar mass         |
| $r_{pillar}$   | $4.731 \times 10^{16}$ m | Pillar height               |
| $E_0^{shock}$  | 0.15                     | Enhanced shock erosion      |
| $\tau_{shock}$ | $1.893 \times 10^{14}$ s | Shock dissipation (6000 yr) |
| $v_{jet}$      | $2 \times 10^5$ m/s      | Protostar jet velocity      |
| $L_{jet}$      | $10^{28}$ W              | Jet luminosity              |

## 2. Master UQFF Gravity Equation (v2)

$$g_{Pv2}(t) = \frac{GM(t)}{r^2}(1+Ht) \left(1 - \frac{B}{B_{crit}}\right) (1-E_{shock}(t)) + (U_{g1}+U_{g4})(1+f_{TRZ}) + \frac{\Lambda c^2}{3} + \frac{L_{jet}}{cM_{tot}} + q(v_{jet})$$

### 2.1 Supernova Shockwave Erosion

$$E_{shock}(t) = 0.15 e^{-t/\tau_{shock}}$$

Stronger than the steady UV erosion ( $E_0 = 0.10$ ), reflecting the impulsive shockwave.

### 2.2 Protostellar Jet Contribution

$$a_{jet} = L_{jet}/(cM_{total}) \approx 10^{-15} \text{ m/s}^2$$
