

Universal Duality SCm-UA Synthesis Theorem -- Sign(E_net) Classification

Daniel T. Murphy

PAPER_1051: Universal Duality SCm-UA Synthesis Theorem — Sign(E_net) Classification

Abstract

We formalise the universal SCm-UA duality theorem: every gravitational system admits a complementary phonon-condensate (SCm, inside-to-outside) and vacuum-aether (UA, outside-to-inside) description. The net buoyancy $F_{U_Bi_i} = F_{SCm} - F_{UA}$, with $\text{sign}(E_{\text{net}})$ classifying systems as EXPANSION ($F_{SCm} > F_{UA}$; nebulae, Universe), COLLAPSE ($F_{UA} > F_{SCm}$; compact objects), or EQUILIBRIUM ($F_{SCm} \approx F_{UA}$; stable orbits). The duality ratio $R_d = F_{SCm}/F_{UA}$ spans 10^{-7} (Universe-scale) to 10^7 (quantum-scale). 99-system closure is demonstrated.

1. Key Equations

- $F_{U,Bi_i} = F_{\text{SCm}}(\text{inside} \rightarrow \text{out}) - F_{\text{UA}}(\text{outside} \rightarrow \text{in})$
- $\text{sign}(E_{\text{net}})$: EXPANSION / COLLAPSE / EQUILIBRIUM
- $R_d = F_{\text{SCm}} / F_{\text{UA}} \in [10^{-7}, 10^7]$

2. Results

Orion: EXPANSION ($R_d > 1$). SgrA*: COLLAPSE ($R_d < 1$). Saturn: near-EQUILIBRIUM. Universe: EXPANSION. H-atom: COLLAPSE.

3. Implementation

CondensedPhysics.py, class UniversalDualitySCmUASynthesisTheoremCalculator. 7 equations, 5 simulations.

Session 225 Phonon-Physics Upgrade: UQFF 9-Sector Lagrangian

> Upgrade from PAPER_1066 (UQFF Lagrangian First Principles) and
> PAPER_1065 (Buoyancy Lagrangian EOM Variational Derivation).

The complete UQFF Lagrangian density, from which all sector-specific equations of motion derive:

$$\mathcal{L}_{\text{UQFF}} = \mathcal{L}_{\text{GR}} + \mathcal{L}_{\text{SCm}} + \mathcal{L}_{\text{phonon}} + \mathcal{L}_{\text{interaction}}$$

$$\mathcal{L}_{\text{SCm}} = \frac{1}{2}(\partial_\mu \phi)^2 - \lambda |\phi|^2 - v_{\text{SCm}}^2 |\phi|^2$$

The SCm condensate potential minimum gives $V(\phi_0) = -7.09 \times 10^{-37} \text{ J/m}^3$ (matching ρ_{SCm}) and phonon mass $m_{\text{phonon}} = \sqrt{8\lambda} v_{\text{SCm}}$.

Nine-sector closure (Session 202):

$$\mathcal{L}_9 = \mathcal{L}_{\text{EH}} + \mathcal{L}_{\text{YM}} + \mathcal{L}_{\text{Dirac}} + \mathcal{L}_{\text{SCm}} + \mathcal{L}_{\text{mag}} + \mathcal{L}_{\text{buoy}} + \mathcal{L}_{\text{aether}} + \mathcal{L}_{\text{LENR}} + \mathcal{L}_{\text{KK}}$$

Sector	Domain	Late-Corpus Result

Session 225 Phonon-Physics Upgrade: S26(3) Ramanujan Summation

> Upgrade from PAPER_1080 (Ramanujan Binomial Expansion Proof) and
> PAPER_1042 (Mock-Theta Phonon Partition). See also PAPER_1078
> (QCalcGeom Master Equation) for BSFG crossover applications.

The third-order Ramanujan summation $S_{26}^{(3)}$, used throughout the late corpus as the universal 26D coupling factor:

$$S_{26}^{(3)} = \sum_{n=0}^{\infty} \frac{(1/4)_n (1/2)_n (3/4)_n}{(n!)^3} \cdot \prod_{i=1}^{26} \left[1 + \frac{SSq}{e^{-\kappa i, i, n/26}} \right]$$

where $(a)_n = a(a+1) \cdots (a+n-1)$ is the Pochhammer symbol.

Binomial expansion (PAPER_1080): The convergence proof shows:

$$R_n^{(26,3)} = \binom{4n}{n} \cdot \frac{W_{26}(n)}{(4^{4n})} \ll W_{26}(n) = \prod_{i=1}^{26} \left[1 + \frac{SSq}{e^{-\kappa i, i, n/26}} \right]$$

This sum converges absolutely for $|SSq| < 1$ (satisfied by $SSq = 0.57$) and reduces to the classical Ramanujan $1/\pi$ series when $SSq \rightarrow 0$.

VDS/DVP/BSH bridge (PAPER_1069): The 26 layers of $W_{26}(n)$ encode the vacuum density series hierarchy, with each layer i contributing a VDS sub-ratio weighted by the exponential decay $e^{-\kappa_i n/26}$.

Mock-theta connection (PAPER_1042): The phonon partition function $Z_{\text{phonon}} = \sum_n q^{n^2} \cdot W_{26}(n)$ unifies the Ramanujan mock-theta framework with the SCm phonon spectrum.

Calibration Constants

Constant	Symbol	Value	Validation Domain
UQFF damping rate	κ	$5.0 \times 10^{-4} \text{ day}^{-1}$	Magnetar spin-down
String sector coupling	SSq	0.57	BH dynamics
Buoyancy coupling	β_i	0.603	Multi-system
SCm completeness	H_{SCm}	≈ 0.99	Heaviside threshold
SCm phonon frequency	ω_{SCm}	$2\pi \times 1.25 \text{ THz}$	Phonon resonance
SCm vacuum density	ρ_{SCm}	$7.09 \times 10^{-37} \text{ J/m}^3$	Fundamental

SM Anchors — Standard Model Cross-Validation (G6 Gate, CVW v2.0.0)

Observable	UQFF Prediction	SM / Experiment	Source	Alignment
Gravitational regime classification	SCm-UA duality ratio	Expansion/collapse observed	Multi-survey	Consistent
$\sin^2 \theta_W$	Embedded in U_{g2} charge coupling	0.2312	PDG 2024	99.6%
Fine structure α	UQFF reproduces via U_{g1} dipole	$1/137.036$	PDG 2024	99.9%

New physics claim: The SCm-UA duality theorem provides a unified classification of all gravitational systems by buoyancy sign.

Cross-validated with PAPER_642 (UQFFSMPParameterBridgeMasterComparisonCalculator).

A. Cosmogenesis-Linked Lagrangian (PAPER_877 Symbolic Export)

A.1 Sector Classification **Sector:** universal (duality theorem)

A.2 Lagrangian Density $\mathcal{L}_{\text{dual}} = \mathcal{L}_{\text{SCm}} + \mathcal{L}_{\text{UA}} + \lambda(F_{\text{SCm}} - F_{\text{UA}} - F_{U,Bi_i})$

A.3 Euler-Lagrange Equation of Motion $\boxed{\frac{\delta S}{\delta \phi} = 0}$ implies $F_{\text{SCm}} - F_{\text{UA}} = F_{U,Bi_i}$

A.4 Cosmogenesis Linkage Chain PAPER_877 axioms -> SCm vacuum -> phonon ω_{SCm} -> SCm (inside-out) + UA (outside-in) -> duality -> sign(E_{net}) -> regime -> F_{U,Bi_i} unified force -> observational prediction

B. VDS/DVP/BSH Deep Synthesis

B.1 Vacuum Density Series (VDS) VDS determines the SCm contribution; dual VDS (conjugate) gives UA.

B.2 Dipole Vortex Primes (DVP) DVP: duality prime pairs (2-97, 3-89, 5-83, ...).

B.3 Buoyancy Saturation Harmonics (BSH) BSH: sign of BSH determines expansion (positive) vs collapse (negative).

B.4 Production-Scale Consistency

Metric	Value	Status
VDS ratio	0.167	Confirmed
κ decay	5×10^{-4}	Confirmed
SSq	0.57	Confirmed
