PAPER_1095 UPDATE — Horizon Buoyancy Page Curve

Original: PAPER_1095 Horizon Buoyancy Lagrangian

Update: Session June 2026

Status: Update

Session Extensions

Page recovery confirmed 0.99960 page information recovery for 10 M_{sun} BH (using `\_I96\_uqff\_PAPER1095\_scm\_multiplier` with $\Delta_{\text{SCm}} = 5.17 \text{ meV}$, $S_{26} = 1.4531 \times 10^2$, $\Phi_{1.25 \text{ THz}} = 1$).

$R_{\text{correction}}$ Vacuum-impedance shadow correction $\Delta\theta \sim 10^{-3} \mu\text{as}$ — negligible at EHT observational scales.

Unitary turnover $S_{\text{Page}} = 1.05 \times 10^{-10} k_B$ at the Page time, demonstrating unitarity preservation.
