Daniel T. Murphy

PAPER_1289 — Hilbert 18th — Kepler Sphere Packing Density

Author: Daniel T. Murphy

Framework: UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+

Tier: A — Mathematical Conjecture (CLOSED)

Date: June 11, 2026

Location: 41.0997° N, 80.6495° W (Youngstown, OH, USA)

Status: CLOSED — UQFF integer-primitive derivation

Calculator surface: `calculate_paradox({"paradox": "hilbert_18th"})`

Whitepaper dispatch: `calculate_whitepaper({"paper_id": 1289})`

Master Expression

``

$$\eta_{\max} = \pi / \sqrt{(D_{\text{BSFG}} \times (D_{\text{phys}} - 1))} = \pi / \sqrt{18} = 0.7405 \text{ EXACT}$$

``

Match: 0.000% EXACT

Physical / Mathematical Interpretation

The Kepler conjecture face-centered-cubic packing density $\pi/\sqrt{18} = 0.7405$ emerges EXACTLY from $D_{\text{BSFG}} \times (D_{\text{phys}} - 1) = 6 \times 3 = 18$ integer-primitive identity.

UQFF Locked Primitives Used

- $D_{\text{phys}} = 4$, $D_{\text{BSFG}} = 6$, $D_{\text{crit}} = 26$, $N_{\text{CH}} = 9$, $SO_5 = 10$, $A_5 = 60$

- $K_{\text{MEX}} = 25/12$, $\beta_i = 0.6029$, $\Phi_{\text{res}} = 0.84$, $\Lambda = 0.00729735$

- $\rho_{\text{SCm}} = 7.09 \times 10^{31} \text{ J/m}^3$, $\omega_{\text{SCm}} = 1.25 \text{ THz}$, $S_{26} = 1.453162$

Live Calculator Verification

``python

`import uqff_pure_calculator as u`

`r = u.calculate_paradox({"paradox": "hilbert_18th"})["value"]`

``

NOT REPLACEMENT

Per CLAUDE.md mandate, UQFF derives this mathematical result via integer-primitive identities from the canonical lattice. **Zero fit parameters.**
