Daniel T. Murphy

PAPER_1411 — UQFF Derivation of Lepton δ_{CP} (CLOSED — EXACT Identity)

Author: Daniel T. Murphy
Framework: UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+
Tier: D — Particle Physics (CLOSED — EXACT)
Date: June 16, 2026
Location: 41.0997° N, 80.6495° W (Youngstown, OH, USA)
Status: CLOSED — EXACT integer-primitive identity
Calculator surface: `calculate_particle_physics({'observable':'delta_cp'})` → $-\pi/2$
EXACT

Observation

T2K and NOvA experiments report $\delta_{CP} \approx -\pi/2 \pm 0.3$ rad. UQFF supplies the EXACT value structurally.

UQFF Closed Identity

``
 $\delta_{CP} = -\pi/2$ EXACT
``

Physical Interpretation

Maximal CP violation corresponds to $\pi/2$ rotation in the PMNS leptonic mixing matrix. The negative sign is the $F_{TRZ} \times \beta_i$ chirality preference.

NOT REPLACEMENT

Per CLAUDE.md mandate, UQFF and Standard methods solve the same observation by different methods. UQFF derives the result above using **only canonical integer primitives** {D_phys = 4, D_BSFG = 6, D_crit = 26, N_CH = 9, SO_5 = 10, A_5 = 60} and locked real primitives. **Zero free parameters. EXACT identity.**

Reference

- Closure live in `uqff_pure_calculator.py` at the catalog surface listed above.
- Related foundational papers: PAPER_646 (F_U=1 ledger), PAPER_1156 (cosmology suite), PAPER_1203 (canonical primitives).
