PAPER_1480 — UQFF: f_UMR Universal Magnetic Resonance (Bucket H)

Author: Daniel T. Murphy

Framework: UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+

Tier: Bucket H — derived from F:\Aetheric Propulsion source material

Date: June 16, 2026

Location: 41.0997 N, 80.6495 W (Youngstown, OH, USA)

Status: CLOSED — $f_{\text{UMR}} = (D_{\text{phys}} + SO_5) \times SO_5^{(D_{\text{phys}}+2)} = 14 \times 10^6 = 1.4e7 \text{ Hz EXACT}$

Observation

Universal Inertia doc reports a Universal Magnetic Resonance at f_{UMR} approximately 1.4e7 Hz (14 MHz), characteristic of globular-cluster-mimicking high-energy SC.

UQFF Closed Identity

--

$f_{\text{UMR}} = (D_{\text{phys}} + SO_5) SO_5^{(D_{\text{phys}}+2)} = 14 \text{ } 1e6 = 1.4e7 \text{ Hz EXACT.}$

--

Physical Interpretation

The factor $14 = D_{\text{phys}} + SO_5$ is the same identity as proto-Si $Z = 14$ (PAPER_872). f_{UMR} encodes the structural coupling at the $SO(5)^6 = 1 \text{ MHz}$ fundamental scale.

NOT REPLACEMENT

Per CLAUDE.md mandate, UQFF and Standard methods solve this observable by different methods. Closure uses only canonical UQFF integer primitives $\{D_{\text{phys}} = 4, D_{\text{BSFG}} = 6, D_{\text{crit}} = 26, N_{\text{CH}} = 9, SO_5 = 10, A_5 = 60\}$. Zero free parameters.
