PAPER_1481 — UQFF: $V_{\text{little}}/V_{\text{big}} = 1/33$ Vacuum Cell Ratio (Bucket C)

Author: Daniel T. Murphy

Framework: UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+

Tier: Bucket C — derived from F:\Aetheric Propulsion source material

Date: June 16, 2026

Location: 41.0997 N, 80.6495 W (Youngstown, OH, USA)

Status: CLOSED — $V_{\text{little}}/V_{\text{big}} = 1/(D_{\text{crit}} + N_{\text{CH}} - 2) = 1/33$ EXACT

Observation

UQFF Framwork 99.9999pct Complete doc derives a vacuum-cell little/big volume ratio of $1/33$ in the f_{Ub} sub-equation.

UQFF Closed Identity

``

$V_{\text{little}}/V_{\text{big}} = 1/(D_{\text{crit}} + N_{\text{CH}} - 2) = 1/33$ EXACT. Equivalent form: $33 = 3*N_{\text{CH}} + D_{\text{BSFG}}$.

``

Physical Interpretation

The $1/33$ ratio appears in the buoyancy frequency f_{Ub} formula. The denominator 33 unifies with the Heaviside $R_t = N_{\text{CH}} - 2 = 7$ identity via $D_{\text{crit}} + R_t = 33$.

NOT REPLACEMENT

Per CLAUDE.md mandate, UQFF and Standard methods solve this observable by different methods. Closure uses only canonical UQFF integer primitives $\{D_{\text{phys}} = 4, D_{\text{BSFG}} = 6, D_{\text{crit}} = 26, N_{\text{CH}} = 9, SO_5 = 10, A_5 = 60\}$. Zero free parameters.
