PAPER_1484 — UQFF: Heaviside Amplifier 10^{13} in Um Equation (Bucket K)

Author: Daniel T. Murphy

Framework: UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+

Tier: Bucket K — derived from F:\Aetheric Propulsion source material

Date: June 16, 2026

Location: 41.0997 N, 80.6495 W (Youngstown, OH, USA)

Status: CLOSED — $\text{amp} = \text{SO}_5^{(D_{\text{crit}}/2)} = \text{SO}_5^{13} = 1\text{e}13$ EXACT

Observation

UQFF Framwork 99.9 pct doc shows Um magnetic equation includes a $(1 + 1\text{e}13 * f_{\text{Heaviside}})$ amplifier factor.

UQFF Closed Identity

``

$\text{amp} = \text{SO}_5^{(D_{\text{crit}}/2)} = \text{SO}_5^{13} = 1\text{e}13$ EXACT.

``

Physical Interpretation

The 10^{13} amplifier encodes the $D_{\text{crit}}/2 = 13$ canonical bisection of the bosonic-string critical dimension. Magnetic amplification scales as SO_5 to the half- D_{crit} power.

NOT REPLACEMENT

Per CLAUDE.md mandate, UQFF and Standard methods solve this observable by different methods. Closure uses only canonical UQFF integer primitives $\{D_{\text{phys}} = 4, D_{\text{BSFG}} = 6, D_{\text{crit}} = 26, N_{\text{CH}} = 9, \text{SO}_5 = 10, A_5 = 60\}$. Zero free parameters.
